

ForgePDF Demo — Page 1

This sample is intentionally dense so you can verify that pages render correctly (not blank).

ForgePDF is a local-first PDF workbench: open files on your machine, annotate, reorganize pages, fill forms, and sign — without uploading to a cloud service.

Try highlight / underline / strikethrough / sticky note / ink / stamp in Annotate mode. Then export and reopen the file to confirm marks were flattened into the page content.

Search for the word RENDER-OK using the search box. If you can find it, text extraction and search are working.

RENDER-OK — if this line is visible, PDF.js rendering succeeded.

ForgePDF Demo — Page 2

Organize mode can merge, extract, delete, rotate, and reorder pages. Open S-merge-b.pdf and merge it into this document as a smoke test.

Light Edit mode places overlay text, images, watermarks, and visual covers. Covers are visual only unless you use the stronger rasterize redaction path.

Zoom with the toolbar. Thumbnails on the left should show readable previews of each page, not empty white rectangles.

Paragraph for scrolling: Lorem ipsum dolor sit amet, consectetur adipiscing elit. Sed do eiusmod tempor incididunt ut labore et dolore magna aliqua. Ut enim ad minim veniam, quis nostrud exercitation ullamco laboris.

Another block: Duis aute irure dolor in reprehenderit in voluptate velit esse cillum dolore eu fugiat nulla pariatur. Excepteur sint occaecat cupidatat non proident.

ForgePDF Demo — Page 3

Form mode works best with S-form.pdf (AcroForm fields). This multi-page text file is for reading, annotation, and organize flows.

Sign mode: draw or import a signature image, then click the page to place it. Export writes the signature into the PDF content stream.

Keyboard shortcuts: Ctrl/Cmd+O open, Ctrl/Cmd+S export, Ctrl/Cmd+F search, Ctrl/Cmd+K command palette.

If pages still look blank after opening, hard-refresh the browser (Ctrl+Shift+R) and confirm /pdf.worker.min.mjs returns HTTP 200.

End of page 3. You should see five pages total including a nearly blank last page used for delete/extract tests.

ForgePDF Demo — Page 4

Checklist for a usable build:

- 1) Open this PDF and see this checklist text clearly.
- 2) Thumbnails on the left are not empty.
- 3) Search finds RENDER-OK from page 1.
- 4) Add a highlight, export, reopen, highlight still visible.
- 5) Rotate a page in Organize mode and export.

Quality bar: if any of the above fails, do not hand the build to users.

Blank page for organize tests (delete / extract)
